AI Search Visibility Audit: Sample Report

Business: Quantum Automated Solutions (QAS), qasny.netlify.app **What the business does:** Small New York business covering home automation gear (owner reviews of the Mammotion Luba 3 AWD robot mower, Ray-Ban Meta glasses), news on the NEO humanoid robot (coming soon), and done-for-you AI workflow kits and automation help. **Checked:** Saturday, September 26, 2026 (ET) **Prepared by:** Quantum Automated Solutions (self-audit, published as a sample)

---

1. How this audit was run (read this first)

Engine	Checked?	How
AI web answer engine (research tool used by our audit bot)	**Yes, 10 of 10 questions**	Each question was asked once. We recorded the written answer and every cited source.
QAS website (technical check)	**Yes**	Fetched all 6 pages in the sitemap. Checked titles, meta descriptions, canonical tags, structured data (JSON-LD), robots.txt, sitemap.xml and llms.txt.
ChatGPT	**Not checked in this sample**	These consumer assistants need a signed-in session, which our research environment did not have. A paid audit checks them in a signed-in browser (see delivery checklist).
Perplexity	**Not checked in this sample**	Same reason as ChatGPT.
Google AI Overviews / Gemini	**Not checked in this sample**	Same reason as ChatGPT.

Engine	Checked?	How
Grok	**Not checked in this sample**	Same reason as ChatGPT.
Bing / DuckDuckGo organic results	**Attempted, inconclusive**	Automated requests were blocked or returned unusable results. No conclusions were drawn from them.
AI phone readiness	**Yes, public website and listings on Sunday, November 22, 2026 (ET)**	We checked published prices, hours and the phone number on the QAS website, and looked for a public Google, Yelp or Facebook listing. We did not have owner access to the Google Business Profile setting, and we did not place a test call.

Important limits: Each question was asked once, on one day. AI answers vary between runs and users. Treat this as a dated snapshot, not a ranking.

---

2. Summary score

Method: For each question: 2 points if QAS is named in the answer, 1 point if a QAS page is cited as a source but QAS isn't named, 0 if neither. Maximum = 10 questions × 2 = 20.

Metric	Result
Visibility score (engine checked)	**2 / 20 (10%)**
Questions where QAS was named	1 of 10 (only the brand-name question)
Questions where a qasny.netlify.app page was cited	**0 of 10**
Questions where a competitor or third party was cited	10 of 10

Bottom line: When someone asks about QAS by name, the answer engine knows who QAS is. It builds that answer from a Contra freelancer profile and a business-registry listing, not from QAS's own website. On all 9 buying-intent questions QAS isn't mentioned, even where QAS has a dedicated page that answers the exact question (Luba 3 problems, Luba 3 vs Navimow, Luba 3 subscription and rain, Luba 3 now vs Luba 4).

3. Question-by-question results

#	Customer question (as asked)	QAS named?	QAS page cited?	Who was cited or named instead
1	Quantum Automated Solutions QAS New York	**Yes** (described as a NY AI and automation company offering Make.com automation)	No	company-detail.com (registry listing), contra.com (freelancer profile, 3 URLs), quantumautomationsolutions.com (**a different company with a similar name**)
2	Is the Mammotion Luba 3 AWD worth it? owner review 2026	No	No	Reddit r/MammotionTechnology (3 threads), Trusted Reviews, PCWorld
3	Mammotion Luba 3 AWD common problems and fixes	No	No	Reddit r/MammotionTechnology (2 threads), berema.no (user manual PDF), roboter-forum.com, autmow.com
4	Luba 3 AWD vs Segway Navimow vs Husqvarna Automower, which robot mower 2026	No	No	lukaswojcik.com, smarthomeexplorer.com (2 guides), robotmowerlab.com, thecooldown.com
5	Does the Mammotion Luba 3 need a subscription and can it mow in the rain	No	No	au.mammotion.com, thetechnologyman.com, Trusted Reviews, two user-manual PDFs

#	Customer question (as asked)	QAS named?	QAS page cited?	Who was cited or named instead
6	Best robot lawn mower for a yard near me 2026	No	No	easylawnmowing.com, therobozone.com, PCWorld, TWICE, NYT Wirecutter. The answer recommended the Mova LiDAX Ultra 3000 AWD and Luba 3 AWD 5000
7	Humanoid robot rental New York 1X NEO rent	No	No	1x.tech (2 pages), ai2.work, robotrentalcompany.com, a LinkedIn post. The answer said "A New York-specific NEO rental is not confirmed"
8	Should I buy the Luba 3 now or wait for Luba 4	No	No	us.mammotion.com and uk.mammotion.com blogs, bastillepost.com, wellbots.com
9	Done-for-you AI automation help for a small business near me	No	No	Odyssai, Suite AI Solutions, LI B2B, a regional automation firm, Neurvana AI (Apeiron also named)
10	Ray-Ban Meta Gen 2 buy now or wait 2026	No	No	TechRadar, smartwearables.io, siliconreport.com, Meta Store

---

4. What we found on the site (technical check)

Page	Structured data found	Canonical tag	Notes
Home `/`	**None**	**Missing**	Title and description present. No Organization or LocalBusiness data describing who QAS is.
`/luba-3-awd-review/`	Review, Product, Organization, Brand, Rating	Yes	Strongest page. The review's author is set to the Organization, not a named person.

Page	Structured data found	Canonical tag	Notes
`/luba-3-awd-review/faq/`	FAQPage	Yes	Good format for AI extraction.
`/luba-3-awd-review/problems/`	None	Yes	Answers question 3 directly but isn't cited.
`/luba-3-awd-review/vs-navimow-husqvarna-ecovacs/`	None	Yes	Answers question 4 directly but isn't cited.
`/owner-checklist/`	None	Yes	Says "Updated September 2026" and mentions Meta Gen 3 was announced Sep 23. The engine's answer to Q10 said Gen 3 became available Sep 24, so this block is due for its promised update.

Other checks: - robots.txt allows all crawlers and points to the sitemap (good). - The sitemap lists 6 URLs (good). - There is no `/llms.txt` (returns 404). This is optional and low priority. - The site is on a netlify.app subdomain, not its own domain. - The homepage covers four different topics (NEO robot news, robot mower, smart glasses, AI kits), which makes it harder for an engine to summarize what QAS is. - The AI automation offer lives on Gumroad and a separate netlify.app site, so there is no services page on the main domain. - Affiliate disclosure is present on the homepage (good; keep it).

AI phone readiness

This section was checked Sunday, November 22, 2026 (ET). The rest of this sample was checked Saturday, September 26, 2026 (ET). These are real findings from QAS's own public pages and listings. Anything we could not verify is marked **Could not confirm**, not as an assumed result.

Google Search may offer customers an option called "Have AI get prices." Google's AI calls local businesses for the customer to ask about price, availability and whether the business can do the job, then sends a comparison by email or text. Calls go to the phone number on the Business Profile and are monitored and recorded. Only businesses that answer get included. Google says it covers select categories and is not offered in a few states, so this may apply to QAS. QAS is a service business and the phone is its personal touch, which makes this worth a look.

Check	What we checked	Status	Plain next step
Accepts Google's AI calls	Whether "Bookings and inquiries from customers" is on under "Google automated calls and text messages"	**Could not confirm**	The Google Business Profile is still pending verification, so there is no public Maps listing and we could not open this setting. After the profile is verified, confirm the setting is on. Go to More, then Business Profile settings, then Advanced settings. A verified profile is required.
Prices loaded	Starting prices in the Google profile services, other listings and the website	**Needs attention**	The website lists the AI Search Visibility Audit at $79 on the homepage, the audit page and the pricing page. We found no public Google, Yelp or Facebook listing with a service price to match. After the Google profile is live, add the $79 starting price to the service there too.
Answers the phone or covers missed calls	A person, a voicemail with a callback promise, or a missed call text back, with no long phone menu	**Could not confirm**	The site publishes (516) 864-1383 and says calls are by appointment. We did not place a test call, so this is unverified, not an example of a failed call. A short voicemail with a callback promise or a text back could potentially help.
Accurate hours	Hours on Google, the website, Yelp and Facebook	**Needs attention**	The website does not list day by day hours. It says calls are by appointment. We found no public Google, Yelp or Facebook hours to compare. Once those listings are live, keep the same hours or the same "by appointment" wording everywhere.

---

5. Gaps

1. **Brand answer comes from third parties, not the site.** The engine described QAS using Contra and a registry listing, and also returned a different company with a similar name (quantumautomationsolutions.com). The homepage has no structured data saying who QAS is.
2. **Pages that answer the question aren't cited.** On Q3, Q4, Q5 and Q8, QAS has a page on the exact topic. The engine cited Reddit, manufacturer pages, manuals and review sites instead.

Likely factors include a young site (review published Sep 15, 2026), few links from other sites, and no mentions in the forums the engine relies on (r/MammotionTechnology was cited on 2 of 10 questions).

3. **No local angle is claimed.** Q6 (a yard near me) and Q9 (automation help near me) are local questions where a nearby owner should have an edge. The site says "New York yard" but has no page built around local conditions, and no services page.
4. **NEO page is thin on facts.** For Q7 the engine said NY NEO rental "is not confirmed" and cited a competing rental company. QAS has no rental or booking offer. NEO is coming soon, so there was no QAS page for the engine to cite.
5. **Freshness.** The Meta Gen 2 vs Gen 3 block and the Luba 4 guidance are time-sensitive. The engine's Q8 answer was built on Mammotion's Luba 4 announcement (unveiled Sep 4, 2026, pre-orders planned for Q4).

---

6. Prioritized fixes

Priority	Fix	Where	Effort
1	Add Organization (or LocalBusiness) JSON-LD to the homepage: legal name "Quantum Automated Solutions LLC", url, logo, areaServed "New York", `sameAs` links to X, YouTube, Instagram and Contra. Add a canonical tag.	`/`	20 min
2	Add a short, plain "About QAS" block and page: who runs it, what QAS does in one sentence, where it operates. This gives engines a first-party source for the brand question and separates QAS from the similarly named company.	`/about/` + homepage	45 min
3	Add FAQPage or Article JSON-LD, a visible "Last updated" date and a named author (Person) to the problems, vs-comparison and checklist pages. Put a 2 to 3 sentence direct answer at the top of each page.	3 pages	1 hr
4	Update the owner checklist now that Meta Gen 3 is on sale and Luba 4 pre-order timing is known. Date the update visibly.	`/owner-checklist/`	30 min

Priority	Fix	Where	Effort
5	Build one local page: "Robot mowers for yards near me: what works on our slopes, trees and clay (owner notes)". Use real photos and local details (sandy vs clay soil, tree cover, season length).	new page	2 hr
6	Earn third-party mentions where the engine is already looking. Answer real questions in r/MammotionTechnology as an owner, disclose who you are, and link only where it genuinely helps and the subreddit allows it. Also pitch the owner review to one or two comparison sites.	off-site	ongoing, 30 min/week
7	Add a services page for AI automation help (what, for whom, price range, area served) on the main site, instead of only on Gumroad and a second netlify.app site.	new page	1 hr
8	Optional: move to a custom domain and add `/llms.txt` with a short site summary. Low expected impact on its own.	site-wide	30 min + domain cost
9	After the Google Business Profile is verified, turn on "Bookings and inquiries from customers," add the $79 starting price to the profile service, and keep hours or "calls by appointment" the same on the site and every listing. Set up a short voicemail with a callback promise or a missed call text back. These are a list of specific steps that could potentially improve how QAS is included if Google offers "Have AI get prices" in this category.	listings and phone	30 min after verification

---

7. Re-check plan

Re-ask the same 10 questions in about 30 days, and include ChatGPT, Perplexity, Google AI Overviews/Gemini and Grok, which weren't checked in this sample. Ask each question at least 3 times per engine, because single runs vary.

This report records only what was observed on the dates above. It makes no guarantee of future rankings or mentions.
